Project Title: CampusConnect – Smart Campus Network and Information Management System

Problem Statement

Students at our university face three recurring problems. Internet connectivity on campus is often unreliable, and students cannot tell in advance how good the connection is. They also cannot easily find out which computer labs are free, so they walk from lab to lab and lose time. Finally, important academic updates such as assignments, quizzes and deadlines are scattered across WhatsApp and class groups, where they are easily buried and missed. Together, these problems waste students' time and cause them to miss important information.

Proposed Solution

We propose CampusConnect, a single system that gives students the information they need about campus life in one place. It will:

- show whether the campus internet is available and how fast it is;
- list which computer labs are currently available;
- keep all academic updates, assignments, quizzes and deadlines in one organised record; and
- remind students of upcoming deadlines so they do not miss them.

Software Used: Microsoft Access and Microsoft Excel
